

Constellations of Us

Interactive Installation

Constellations of Us

Interactive Installation - Overall Vision

Create an immersive and interactive installation that allows the public to manipulate and create a unique starscape. The aim is for it to be intriguing to the eye with abstract galactic art, allowing families and individuals to experiment with the visuals that can be created with body position and collaboration.

Constellations of Us

Interactive Installation - Places of inspiration

The installation is a version of generative art, this differs from regular animation as the art is not a static but is continuously created or modified by algorithms and real-time data inputs. In our case it would evolve based on active participants whose bodies trigger changes in the artwork.

Jason Bruges is a multimedia artist who creates bespoke installations, often responding to the presence of the public. These examples use LEDs which isn't our plan, but are successful examples of interaction based artwork.

Possible art styles for animated visuals that could be played

Constellations of Us

Interactive Installation

Projection mapping allows the visuals to be played on any surface, this means we can set up an installation in different ways. Could take up sides of a room, a singular wall/projector screen or projected onto object setups. Could even be projected outside the building? Sensing people entering and exiting the building.

Project Schedule

Early Stage Project Schedule: Using agile work methodology to produce a working prototype as quick as possible

Month	Task	Notes
Month 1	Research, ideation, exploration and prototyping Social media behind the scenes content.	Solidifying the idea and begin a mock-up of the final concept - testing 3D materials for the projection setup, creating concept art and finalising the design language of the piece.
Month 2	Refining and further development.	Finalise physical spacing and develop more promotional material.

Team Roles

To ensure we can complete the project on time it is important to split the concept into smaller more manageable tasks that can be worked on simultaneously by different members of the team.

Constellations of Us

Intended Audience

The installation should peak the public's interest so that they are curious enough to interact and play around with movement and collaboration.

The hope is for kids and adults alike to enjoy the experience of the piece so it must be accessible to people of all ages:

- Easy to understand (intuitive)
- Playful and intriguing
- Engaging
- Responsive
